

## Questions and Answers

1. At four-year colleges, are completion rates improving each year?
  - Yes, my analysis shows that as the future income of the college graduates increase that creates a positive impact on the college passout rates too.
2. Are College completion rates increasing for low-income students?
  - Yes, to some extent although I have not being able to prove this with my dataset due to privacy issue. But I can conclude that based on the study it looked better.
3. Does a better school has better average SAT score for the attending students?
  - Yes, this has been proved with data. Also I have seen a positive correlation between SAT score and higher future income which implies better colleges.
4. Does a better school provide more advanced degrees?
  - This is not totally proved with my dataset and the current analysis that I have done so far. I intend to dig further into my dataset to get more insights.
5. Does a better school have higher faculty salary?
  - Yes, this is shown to be true with my analysis of the dataset
6. Do better schools have more selective admissions?
  - Yes, the more harder it is to get into a school that is considered a better school. The school is better as it has more higher median salary than the easier schools.
7. How many students have access to financial aid?
  - It looks that a very high percentage of students from my population set has access to the aid.
8. What is the breakup of gender in getting aid?
  - NA. I have not split up my data based on gender.
9. Does gender affect future earnings?
  - I have not done a study for the gender difference in the earnings data. I have plans to do that in the future.
10. Do we see any racial bias in the aid process?
  - This is hard to say so far as I have seen in my dataset.
